SwabSleeve™
Fully enclosed, sterile packaging for SwabCap™ disinfecting caps
Maximize safety and clinical efficiency with SwabSleeve, SwabCap’s new sterile packaging, giving you easier access to proven infection control technology at the point of care.¹ ²

Introducing SwabSleeve, our new fully enclosed, sterile packaging for SwabCap disinfecting caps, designed to meet your infection control needs across all areas. The transparent SwabSleeve hangs securely from an IV pole, providing clinicians with easier access to SwabCap while maintaining your infection control best practices.

Unlike strips, which expose disinfecting caps to potential contamination, the SwabSleeve packaging provides better sterility by:

Eliminating Touch Contamination  
Allowing for Easier Cap Dispensing  
Allowing Visibility from All Angles

For more information on the new SwabSleeve, contact your local ICU Medical SwabCap product representative.
