Directions for Use

Disinfect to Protect
› When placing a new Clave on a catheter, disinfect the catheter hub and prime the Clave.
› Before accessing a Clave, always disinfect the injection site with the approved antiseptic per facility protocol.
› Scrub the injection site in accordance with facility protocol for appropriate scrubbing and dry times.

Administer or Aspirate
› Attach IV tubing, syringe or blood tube holder to Clave by inserting the luer and twisting ¼ turn, or until a friction fit is achieved.
› Do not over-tighten a luer beyond the friction fit as this may damage both the luer and the Clave.
› To disconnect, grasp Clave and then twist mating luer counter clockwise until loose. Do not hold catheter hub during disconnect as this may cause accidental removal of Clave from hub.

Flush After Each Use
› Flush the Clave with normal saline or in accordance with facility protocol. After blood use, the Clave can be flushed clean and does not require change-out.
› Use routine flushing in accordance with facility protocol in order to maintain catheter patency.
› Change Clave in accordance with facility protocol and CDC Guidelines.

Functional Attributes
› Lipid and Blood Compatible
› Radiographic Imaging Compatible (CT Compatible)
› Contains No Latex or Metal Components, MRI Compatible
