NovaCath™
Integrated IV Catheter System

The information provided is intended to assist with selecting the proper catheter type and settings for power injection.

Power Injection Guidelines

› The 18, 20, and 22 gauge NovaCath devices are suitable for use with power injectors up to 300 psi within maximum flow rate recommendations (below)
› The 24 gauge NovaCath devices should not be used with power injectors
› The patency of the catheter must be assured before connecting the power injector to the catheter via a direct connection
› Measures should be taken to avoid kinking or obstructing the catheter system during power injection to avoid product failure

*Note: Power injection flow rates were verified using a simulated contrast media with a viscosity of 11.8 cP at a temperature of 20°C. Refer to package insert for full Instructions for Use.
